DFense Blok™

Description: DFense Blok™ is a revolutionary wear and abrasion alumina ceramic bead-filled epoxy compound. DFense Blok™ is formulated to significantly outlast traditional wear and abrasion products while also providing superior performance in the most severe conditions.

Intended Use: Repair scrubbers, ash handling systems, pipe elbows, screens, chippers, bins, hoppers, bunkers, separators, digester tables. Protect exhausters, launderers, housing fans, crushers, breakers, and conveyor screws.

Product features:
- Outstanding wear and abrasion resistance
- Able to withstand high impact forces
- Resistance to a wide range of chemicals
- Non-sagging

Technical data should be considered representative or typical only and should not be used for specification purposes.

Physical Properties:
- Adhesive Tensile Shear: 2,616 psi
- Coefficient of Thermal Expansion: 29 [in / (in x °F)] x 10^-6
- Color: Gray
- Compressive Strength: 7,145 psi
- Cured Hardness: 77D
- Cured Shrinkage: 0.0005 in/in
- Dielectric Constant: 49
- Flexural Strength: 7,876 psi
- Recoat Time: 2 to 3 hours
- Specific Gravity: 2.21
- Specific Volume: 12.6 in(3)/lb
- Temperature Resistance: Dry 300 °F; Wet 140°F

Surface Preparation:
1. Thoroughly clean the surface with Devcon® Cleaner Blend 300 to remove all oil, grease and dirt.
2. Grit blast surface area with 8-40 mesh grit, or grind with a coarse wheel or abrasive disc pad, to create increased surface area for better adhesion (Caution: An abrasive disc pad can only be used provided white metal is revealed). Desired profile is 3-5mil, including defined edges (do not "feather-edge" epoxy).

Note: For metals exposed to sea water or other salt solution, grit-blast and high-pressure-water-blast the area, then leave overnight to allow any salts in the metal to "sweat" to the surface. Repeat blasting to "sweat out" all soluble salts. Perform chloride contamination test to determine soluble salt content (should be no more than 40ppm).

3. Clean surface again with Devcon® Cleaner Blend 300 to remove all traces of oil, grease, dust or other foreign substances from the grit blasting.
4. Repair surface as soon as possible to eliminate any changes or surface contaminants.

WORKING CONDITIONS: Ideal application temperature is 55°F to 90°F. In cold working conditions, directly heat repair area to 100-110°F prior to applying epoxy and maintain at this temperature during product cure to dry off any moisture.
Mixing Instructions:

--- It is strongly recommended that full units be mixed, as ratios are pre-measured. ---

1. Add hardener to resin.  
2. Mix thoroughly with screwdriver or similar tool (continuously scrape material away from sides and bottom of container) until a uniform, streak-free consistency is obtained.

INTERMEDIATE SIZES (1, 2, 3 lb. units): Place resin and hardener on a flat, disposable surface such as cardboard, plywood or plastic sheet. Use a trowel or wide-blade tool to mix the material as in Step 2 above.

LARGE SIZES: (25 lb., 30 lb., 50 lb. buckets): Use a T-shaped mixing paddle or a propeller-type Jiffy Mixer Model ES on an electric drill. Thoroughly fold putty by vigorously moving paddle/propeller up and down until a homogenous mix of resin and hardener is attained.

Application Instructions:

If grit blasting is not possible and expandable metal cannot be used, it is recommended that Defense Blok™ Surface Wetting Agent be utilized. The Defense Blok™ Surface Wetting Agent can also be used wherever it is desirable to maximize cured adhesion properties (shear, peel, impact). Apply Devcon® Defense Blok™ Surface Wetting Agent at 10-20 mils to prepare the metal surface. Immediately apply Defense Blok™ over the Defense Blok™ Surface Wetting Agent. It is recommended that the Defense Blok™ be applied within 45 minutes of mixing/applying the Defense Blok™ Surface Wetting Agent. Should this window be exceeded and the Defense Blok™ Surface Wetting Agent becomes firm, a recoat of Defense Blok™ Surface Wetting Agent is recommended.

Spread mixed material on repair area at a minimum thickness of 1/4”. Work firmly into substrate to ensure maximum surface contact. Defense Blok™ fully cures in 16 hours. Application Tip: For easier “workability,” a light coating of Devcon Cleaner Blend 300 or 99% Isopropyl Alcohol (IPA) on the surface of the tool used to transfer/spread Defense Blok™ is recommended.

FOR BRIDGING LARGE GAPS OR HOLES

Place fiberglass sheet, expanded metal or mechanical fasteners between repair area and Defense Blok™ prior to application.

FOR VERTICAL SURFACE APPLICATIONS

Defense Blok™ can be troweled up to 3/4” without sagging. If greater vertical thickness is desired, apply first layer at 3/4”, wait until product is firm and heat of reaction dissipates, apply a second layer of 3/4”. Repeat as needed.

FOR OVERHEAD APPLICATIONS

The Defense Blok™ Surface Wetting Agent is recommended to facilitate ease of application on overhead surfaces. Refer to the first paragraph of the Application Instructions section for details. Defense Blok™ can be applied up to 1/2” to overhead surfaces. If greater thickness is desired apply first layer at 1/2”, wait until product has firmed and heat of reaction dissipates, apply a second layer at 1/2”. Repeat as necessary.

FOR ± 70°F APPLICATIONS

Applying epoxy at temperatures below 70°F lengthens functional cure and pot life times. Conversely, applying above 70°F shortens functional cure and pot life.

FOR ± 70°F APPLICATIONS

Applying epoxy at temperatures below 70°F lengthens functional cure and pot life times. Conversely, applying above 70°F shortens functional cure and pot life.

Storage:

Store at room temperature, 70 °F.

Compliances:

None
